VICTORY is at last won and we can relax a bit the tension of a struggle which has more or less involved every human being in our land. It is absolutely necessary for every one of us to spend some time now in thinking about the future stretching before us. Unless mankind grows out of its boisterous youth and seriously considers the years ahead it seems certain that, with the limitless forces now becoming available, it will commit a horrible and agonizing suicide.

For all our boasted centuries of civilization large segments at least of the human race have been recently at about the same cultural stage as the ant colonies which enslave most of their own population and carry death and destruction to all neighboring colonies.

Every right thinking soul must back the United Nations diligently, must criticise only constructively, and must school himself to look with a friendly and understanding eye on all the other right thinking souls of the world.

The farmer in his more or less solitary occupation naturally does a lot of thinking and usually most of it is sound. His thoughts will be even more valuable to mankind in the involved period before us, just as will his efforts to produce for the feeding and clothing of the world.

We must all carry on in our appointed tasks with an increased awareness of the dangers that beset us and a determination to give increased attention and support to world welfare. The world has shrunk to the size of a small city of a century or two ago and there is more racial friction more widely spread than ever before. However, the more friction the quicker and better should be the resulting smoothing and polishing. So with definite resolution and determined effort we can all help to make the world happier, more understanding and more peaceful.

This is our 64th annual Catalog. We are prepared to serve our customers better than at any time in the past four years. There are many shortages and early ordering is advisable.

OUR RESPONSIBILITY. It is so manifestly impossible for a seller of any perishable goods to be

responsible for what happens to them after they leave his hands, especially goods like seeds and plants which are planted in the ground under varying conditions of soil and climate, that we, in common with all American seed houses, disclaim responsibility as to crop which may be raised from the seeds which we sell.

We wish it understood that all goods are sold under the following general non-warranty.

We give no warranty, express or implied, as to the productiveness of any seeds, trees, plants or bulbs we sell and we will not be in any way responsible for the crop. Our liability, in all instances, is limited to the purchase price of the seed.

However, we wish to call the attention of our customers to the fact that we make careful tests of all seeds in our stock and endeavor to see that nothing but goods of the very highest quality are sent out.

We urge most strongly that every bit of seed grain or seed corn received from us be tested. Should the test prove unsatisfactory or the goods not as represented we should be notified at once and an immediate adjustment will be made.

With regard to trees or plants, if sent by express, and damage is noted by consignee at the station, we are glad to replace or refund. We do not guarantee nursery stock and plants after being taken from the express office, but are always willing to give attention to just claims for loss.

SIBERIAN PERENNIAL SWEET PEAS (P). The vines are about 5 feet high, absolutely hardy and bloom all summer if blossoms are kept picked. Pkt., 15c.

A Few Suggestions

The Sweet Pea plant or vine succeeds best in cool, moist, yet well drained soil. To secure the longest possible season of bloom the seed must be planted early. The best mode of planting is the trench method. The trench is dug two feet deep and two feet wide, and filled nearly to the surface of the ground with a mixture of well rotted manure and rich soil, with a six-inch layer of soil at the top. Soaking seed in water over night before planting will hasten germination. The seed should be sown, two inches deep, at the rate of one ounce to twenty feet. During dry weather the ground should be thoroughly soaked once or twice each week. A light spraying of the vines in the evening during hot weather will be found beneficial, and the earth should at all times be kept loose about the plants to a depth of two inches. Sweet Peas should be cut early in the morning and the more closely the flowers are kept cut off the longer will be the period of bloom. Remember, the vines quickly wither, if allowed to produce any great amount of seed. Spray thoroughly and often to prevent infection by aphids.

Fordhook Bush Lima

WILL'S BEANS

Belong in Every Garden

CULTURE: Beans should not be planted until the ground is warm, as cold and wet weather will cause the seed to rot. For garden culture plant four or five seeds in hills one foot apart, and the rows 18 inches apart. For field culture make the rows three or three and one-half feet apart, and cover with two inches mellow soil. Do not hoe or cultivate while the plants are wet with dew or rain, as getting the leaves bespattered with earth causes rust, which injures the crop. One pound of beans is a little more than one pint.

Culture: For early plants sow seed in boxes indoors or in hot bed, allowing 6 to 7 weeks from sowing to setting in the open ground. Some recommend planting the seeds in the field, 3 or 4 seeds to a hill and leaving the strongest plant. One ounce of seed will produce from 1500 to 2000 plants in open ground, 3000 in frames. 4 to 6 ounces of seed is required to produce plants for an acre.

Improved Hubbard

Buttercup Squash

BUTTERCUP. Originated in North Dakota by Professor A. F. Yeager. The squashes weigh between 3 and 5 pounds with thin, tough green skin. There is no fibrous section and the thick, rich orange flesh has no tinge of green. It is a good keeper with very little waste in cooking. The flavor is sweet and fine; the texture smooth and dry. Arikara

Culture. Sow in hotbed or shallow boxes in the house in early Spring, allowing 8 to 10 weeks from sowing indoors to setting in open ground; when plants are large enough, transplant into hotbed or boxes and when all danger from frost is past transplant into open ground, about four feet apart each way.

Victor

NEW HAMPSHIRE VICTOR. Developed by Dr. A. F. Yeager at the University of New Hampshire. A cross of Allred and Marglobe, perhaps 2 or 3 days later than the original Victor, but an improvement in several respects, particularly disease resistance. Pkt., 15c; $\frac{1}{2}$ oz., 60c; oz., \$1.00, postpaid.

MILLET'S DAKOTA. The hardiest, most drought resistant early Tomato.

It is as early as the earliest strain of Earliana. The fruit is medium sized, smooth, and rich deep scarlet, of high quality. Under unfavorable conditions we believe it will outyield other varieties and we have been surprised at its amazing performances under irrigation. Pkt., 10c.

These fruits when fully ripe make excellent pies, preserves, and jam. Pkt., 10c; oz., 65c.

Will's Early VICTOR

All America Bronze Medal Winner. A fine contribution by Dr. A. F. Yeager to Tomato Progress. Brought out at the Michigan State College. This is a cross between Allred and Break O'Day. In Victor are combined the determinate or self-pruning habit of Allred and Bison, the earliness and uniform color of Allred, and the smoothness of Break O'Day. The somewhat flattened fruits are a desirable red in color, very fleshy and resist cracking. Market quality is very high and culls few. If you want earliness, high quality and yield, try Victor. Pkt., 10c; $\frac{1}{2}$ oz., 40c; oz., 70c; $\frac{1}{4}$ lb., \$2.25, postpaid.

Hardy Tomatoes

BISON

The Tomato for Northern Gardens

The first of Dr. Yeager's self pruning or determinate Tomatoes and a standby in this section. Yeager, by the Upper Peninsular Experiment Station, Chatham, Michigan, for home gardens in areas of short growing seasons. The plant is determinate; the fruits are good sized—the largest of any extra early variety, all over ripening, of high quality, smooth uniform shape and good color. Can be sown in open ground with good results, with of course earlier Tomatoes if started indoors. Pkt., 15c; $\frac{1}{2}$ oz., 50c; oz., 80c; $\frac{1}{4}$ lb., \$2.50, postpaid.

PIONEER HYBRID SEED CORN

We are the only commercial Seed House in the North that has conducted a long continued project of Corn inbreeding and crossing with special reference to Northern Plains conditions.

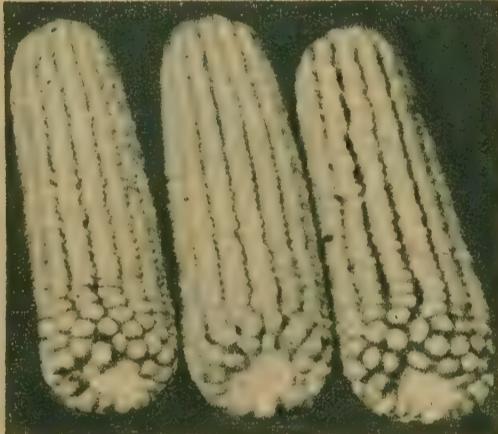

We are offering this year several Hybrids, particularly adapted to the Northern Plains and Midland country. It is too bad that the real value of adapted hybrids has been obscured by the promiscuous selling of hybrids in no way adapted to the territory by gullible or irresponsible dealers who did not know what hybrid meant and often did not care.

We offer some of our own hybrids, products of ten to twenty years of breeding and testing. We know that they will outyield similar types of common seed corn, stand up better and be easier to pick.

We offer also early yellow dent hybrids from the corn breeding department at the State Experiment Station or other extra early types.

Try hybrids bred for the Northern Plains and you will be surprised and delighted by the results.

We have tested these all for several years and find they yield well above the ordinary strains of corn and possess greater vigor and strength. Yield depends on several factors. They are: number of ears to the stalk, number of stalks to the hill, size of the ears, and maturity of the ears at the average frost date. We believe that our hybrids will make a high score under each of these headings.

Hybrid "E"

YELLOW DENT HYBRIDS

PIONEER HYBRID "J." 90 days. A fine pure yellow Dent with extraordinary wind and storm resistance. Tall, ears high, a heavy yielder.

PIONEER HYBRID "E." 85 days. A very uniform and strong combination of Alta yellow dent inbreds, which easily out-yields open pollinated Alta and is very early.

Perhaps the best adapted pure yellow dent for the Great Plains.

NODAK HYBRID No. 203. 85 days. Somewhat earlier than No. 201 and a little sturdier. We have found it to do somewhat better under our local conditions. A beautiful appearing yellow dent.

WHITE DENT HYBRID

PIONEER HYBRID "F." 85 days. A pure white dent hybrid, which will outyield, we believe, any yellow dent hybrid available, a combination of four of our best Crimmins Rustler inbreds. Very sturdy and strong rooted and not subject to wind damage.

SEMI-DENT HYBRIDS

PIONEER HYBRID "A." (See inside front cover.) 80 days. This is a cross from four inbred Falconer strains. The result is a uniform Falconer type corn, somewhat more upright, easier to pick and better yielding.

PIONEER HYBRID "N." 85 days. Combines the yellow dent qualities of an outstanding yellow dent single cross with the hardiness, earliness, drought and cold resistance of two outstanding Falconer inbreds. A large eared yellow semi-dent that grows straight and tall and yields very heavily.

HYBRIDS FOR SHEEPING & HOGGING OFF

These two hybrids between dent and flour corn are the heaviest yielders of any varieties we have ever seen. They do not grow very high and are easily reached by the feeding animals. The flour corn parent gives them a softer quality which makes them more easily chewed and ground up.

PIONEER HYBRID "H." 80 days. This is a combination of a white flour corn single cross on a Crimmins Rustler single cross.

PIONEER HYBRID "I." 80 days. A cross between Falconer and white flour corn, a trifle earlier than "H," a mixed yellow and white in color.

Drying and sorting are very slow this year. We are not quoting prices due to the uncertainty of supply on account of the heavy, early freeze. Write for our Special Seed Corn Price List.

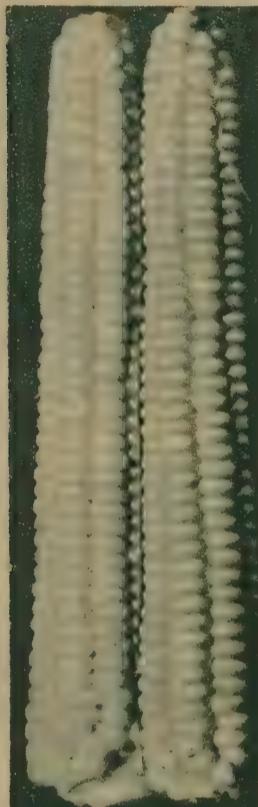

Hybrid "N"

PLANT HYBRIDS BRED FOR THE NORTHERN PLAINS.

FLINT CORN

Dakota White in Cribs

Dakota White

DAKOTA WHITE FLINT

Seventy Day Corn

The first variety produced by Oscar H. Will in the early eighties. A pure, pearly white flint, 8 to 12 rowed, long slender ears with small cob and a great deal of grain. Many ears to the hill, and yields of 50 bu. per acre have been reported. Stalks are leafy and bushy, a wonderful variety to feed off in the field. Height from 3 $\frac{1}{2}$ to 5 $\frac{1}{2}$ ft. Lb., 35c, postpaid.

Gehu

WILL'S GEHU YELLOW FLINT

Seventy-five Day Corn

The best known of our native early flints. We have shipped it to every continent. It has been carefully bred by us for years and shows the effect of this breeding. Its feeding qualities are the highest of any variety of Corn, it is leafy and produces a tremendous amount of excellent fodder, since there is no heavy stalk, and every part of the plant is utilized. It is drought, frost and hail resistant to a wonderful extent in addition to its great earliness. In good soil and under favorable conditions it may be cut with a Corn binder. Gehu is of a lemon-yellow color, ears mostly twelve-rowed, 7 to 10 inches in length. Stalks 4 to 6 feet. Ears 10 to 18 inches from the ground. Lb., 35c, postpaid.

MERCER FLINT

Ninety Day Corn

A fine silage variety with stalks 6 to 8 ft. high, leafy, with slender stalks, ears long and slim, several to a hill, color orange-yellow. A second early sort that does not always mature in short seasons. Fine to feed in the bundle as well as for silage. We have an extra good acclimated strain. Lb., 35c, postpaid.

BURLEIGH CO. MIXED or DAKOTA SQUAW CORN

Seventy Day Corn

Hardy—Early—Heavy Yielding. This is a mixed form of the early flint and is the first variety listed by us after our business was started. It is very resistant to both drought and frost, and fully as heavy a yielder as any variety of early flint. It is of mixed colors, yellow, white, blue and red predominating, ears long and slender, mostly eight-rowed. This Corn shells out heavier than any other variety. Lb., 35c, postpaid.

Dakota Squaw

ASSINIBOINE FLINT CORN

FALCONER SEED CORN

Oscar H. Will & Co. Strain—Highest
Yielding Corn for the Northwest

Falconer corn is grown by the hundreds of thousands of acres now and many thousands of these acres are off type, unselected or poorly selected scrub corn of the poorest type and certain to make inferior yields.

We introduced Falconer Corn. Falconer in careful tests over most of our state has outyielded every variety including many hybrids.

The answer seems obvious then. Buy genuine Falconer of true, high yielding strain from Oscar H. Will & Co.

This book covers the subject of Corn for the Great Plains and the Northwest fully and treats of corn growing in every department. Written clearly and concisely, it can be used as a text book in agricultural classes. Price, 50c. Postpaid, 60c.

RED STAR—THE NEW SEMI-DENT

(See inside Front Cover)

RED STAR. We believe that we have an outstanding new variety here. A cross of Falconer, Alta Yellow Dent and Siberian Flint. The latter is very early but does not go down after ripening and carries its ears high on the stalk. This is an 80 day Corn. A very heavy yielder and ear and stalk resemble the Siberian parent. Lb. postpaid, 40c.

Red Star Semi-Dent

EARLY TYPE MINNESOTA 13

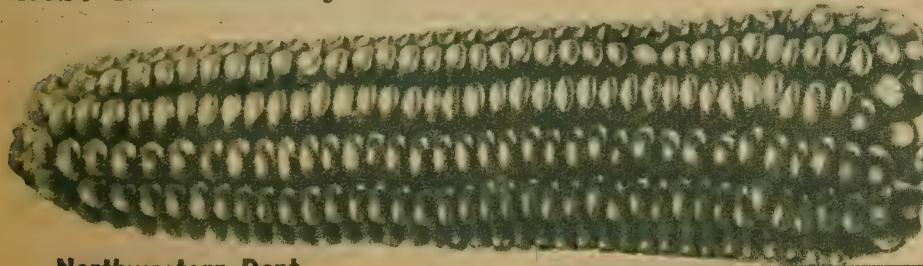

We offer two strains of Minn. 13 with 85 to 95 days' maturity. The Haney Strain is best adapted to the heavier soils and moisture climate; the Boyd Strain is adapted to Great Plains conditions. WILL'S ORIGINAL NORTHWESTERN DENT

The original Northwestern Dent Corn, a history of which is given in Bulletin No. 107 of the Montana Experiment Station, was introduced by Oscar H. Will in 1896, and almost immediately attained great popularity over the whole Northwest.

Northwestern Dent

It is extremely hardy and will produce a crop when all other dents fail, owing to its frost and drought resistance. It ripens in 80 to 85 days. Lb. postpaid, 35c.

4X FODDER CORN—Southern Grown, Tall, Leafy

The 4X is, we consider, the very best procurable fodder Corn for Northwestern conditions. We get this grown just far enough south so that maximum quantity of fodder is produced and at the same time the stalks come near enough to maturity so that they are not all water. The best time to cut Corn for fodder is when the kernels are just past the roasting ear stage. Sow or drill ten pounds to one-half bushel per acre, if planted with a planter; 2½ bu. if broadcasted.

SWEET FODDER CORN—Wonderful Feed for Milch Cows

Sweet Fodder is coming to occupy a place of very high esteem as a feed for milch cows. Owing to the fact that its sugar content is so high it is a more concentrated feed than the ordinary Corn. It is likewise a heavy yielder as it is so bushy, and there are no heavy, coarse stalks which are usually waste. Lb., 30c, postpaid.

WILL'S PIONEER BRAND GRASS SEED

DIRECTIONS FOR MAKING LAWNS

The seed bed should be spaded or plowed to a depth of 6 or 7 in. All lumps should be broken up, the surface smoothed with rake or plank and well firmed. Sow evenly on a quiet day, rake in well and roll if possible. Use seed at the rate of 1 lb. per 200 square ft. If possible water thoroughly at once.

Good loam soil is best; for the finest lawn black dirt may be spread several inches thick but a good turf of the hardier varieties does not require it.

Our Emerald Mixture should be used for the best lawns

Red Top is adapted to shady spots.

For a little harder conditions but where some watering

For a good looking dry land lawn, farm yard or large Crested Wheat Grass.

Do not permit the watered lawn to dry out at all until the grass is well up.

Fertilize from year to year as indicated by the condition of the lawn. We recommend Vigoro.

We shall be glad to give advice and make up special mixtures for airports, parks, public school grounds, football fields, etc.

SHADE AND ORNAMENTAL TREES

CHINESE or SIBERIAN ELM. As a wood lot, shelter belt or grove tree and as a formal or natural hedge this tree has a very definite place in Northwestern planting. Drought resistant and rapid growing beyond almost any other sort. The occasional winter damage explains why we have steadily refused to recommend this tree as a street or lawn tree. In spite of the winter injury, which has occurred only once every 15 or 20 years, we still feel that this very fast growing and drouth resistant tree possesses great value in the Great Plains. Even if it has to be cut back to the ground it will recover in a year or so and produce more new growth than could be obtained in the same time by re-planting with any other tree. Price, 3 to 4 ft., each, 10c; 10 for \$75c; 100, \$7.00; 4 to 6 ft., each, 30c; 5 for \$1.35; 50, \$10.00; 6 to 8 ft., each, 50c; 5 for \$2.25; 8 to 10 ft., each, \$1.25. For seedlings, see page 59.

Fertilizers for All Purposes

Prices Subject to Change Without Notice.

Experiments during the past few years have shown that phosphorus is the most needed element in most prairie soils.

The three necessary elements in plant growth which are not always present in the soil are nitrogen, which stimulates luxuriant growth; phosphorus, which has a tendency to force bearing and hasten maturity, and potash which stimulates growth, delays maturity of grains and grasses but hastens maturity in root crops. For gardens, yards, lawns and small intensively cultivated areas the ready prepared fertilizers such as Vigoro are the most economical and convenient to use and the best adapted.

VIGORO

Complete plant food

quality and the production of your vegetables, small fruits and ornamental shrubs.

Vigoro contains all the 11 elements needed for proper plant nourishment.

Use 4 lbs. to 100 Sq. Ft.—Prices F. O. B. Here, 100 lbs., \$4.00; 50 lbs., \$2.50; 25 lbs., \$1.50; 10 lbs., 85c; 5 lbs., 45c; 1 lb., 10c, postpaid 18c.

SUPERPHOSPHATE. Phosphorus is said to be the element the most likely to be lacking in the prairie soils of the Northwest, and is not supplied in any form by applying vegetable matter by turning under or otherwise. Use one to two hundred pounds per acre. It may be broadcasted on. Price 20% formula, 10 lbs., 40c; 50 lbs., \$1.40; 100 lbs., \$2.50. Write for quantity prices.

For lawn, flowers, small fruits and the vegetable garden Vigoro is the ideal fertilizer. Apply it to the lawn in early spring and watch the grass turn green and grow luxuriantly. It improves both the quality and quantity of all kinds of flowers, both annual and perennial and will add greatly to the small fruits and ornamental shrubs.

PULVERIZED SHEEP MANURE. This is by far the most concentrated of the cheaper fertilizers and is adapted especially for garden and lawn use. Use from 5 to 10 lbs. per 100 square feet. Price, 10 lbs., 40c; 25 lbs., 50c; 50 lbs., 70c; 100 lbs., \$1.00; 500 lbs., \$4.75; 1000 lbs., \$9.25; ton, \$18.00.

HYPONEX—PLANT FOOD—STARTER FOR TRANSPLANTING

With Hyponex-and-water, plants grow luxuriantly, flower abundantly and develop sturdy growth regardless of the poorness or sterility of the soil.

In fact, with Hyponex they will grow and flourish in clean sand, cinders or barren earth. Hyponex is ideal for hydroponics—the science of growing

plants without soil. Dip tomato and other plant roots in a solution when setting out.

A teaspoonful makes a gallon of liquid plant food, which is enough for one watering of house plants in the average home. A 1 lb. can is sufficient to make 100 gallons. 1 oz., postpaid, 13c; 3 oz., 30c; 1 lb., \$1.15.
